

THE CLINICAL MANAGEMENT SYSTEM OF CHOICE

What sets AutumnCare apart from other vendors on the market?

1

Industry Experience

Put simply, AutumnCare has more experience than the recent flood of new vendors entering the market combined.

We have been in operation since 2000 and the cumulation of over 20 years of experience in the Residential Aged Care space is evident in the breadth of content available within our system, as well as the professionalism of the services we offer.

We continue to embody small business values and an agile approach to development which affords us the ability to pivot to new priorities as they emerge, a critical capability in a sector known for ever-changing legislation.

2

Clinical Content

AutumnCare boasts a point of difference in its clinical content which is unrivalled by any other system on the market.

AutumnCare contains over 120 forms, charts and assessments and over 70 pre-set reports.

Clinical best practice and guidance is embedded throughout the system to ensure that staff follow the correct clinical process at all times.

Validated tools including IDDSI, EAT-10 and the Delirium Screening Pathway have been incorporated into AutumnCare's form set.

These tools are regularly reviewed to ensure that they remain current and aligned with industry recommendations.

3

Compliance Support

Aged care is a highly regulated industry, with the Aged Care Quality and Safety Commission, not to mention families and the justice system.

AutumnCare makes it easy and efficient to evidence the quality of care you provide. Our audit trails ensure the information provided is accurate and complete.

Inbuilt content encompassing SIRS, NQIP, Unannounced Quality Visits, Behaviour Support and Restrictive Practice is designed to assist AutumnCare users in evidencing compliance.

Rather than leave the form design to you, our team has this in hand. We can even deliver automated NQIP reports to your inbox on a monthly basis!

4

Strengthened Governance

AutumnCare provides Managerial staff with powerful oversight of their entire organisation.

This is achieved via the Dashboard, reports and a complete audit trail which ensures that every action performed within AutumnCare is stamped with an author and date.

Run reports to view the completion level of various assessments and utilise Dashboard indicators to track incidents, wounds and other critical clinical events.

AutumnCare provides the ability to drill down into data to gain the insight required to manage and improve clinical process.

5

User Driven Development

AutumnCare product development is heavily user driven. 42% of the new features in AutumnCare 2022 are based on suggestions from AutumnCare users. These suggestions are either emailed to the team directly or discussed at User Group forums.

Our eNRMC and ePrescribing functionality is currently being developed in conjunction with Whiddon.

By involving clients in the inception and development phases we ensure that our product is fit for purpose and truly delivers on providing a solution for staff working on the floor.

6

Offline Capabilities

A unique point of difference provided by AutumnCare is our offline mode. Unlike a web-browser, which requires constant internet connection to remain functional, AutumnCare employs an Occasionally Connected Computing (OCC) model to allow system usage even when network outages or failures occur.

The ability to access and enter data whilst offline is critical to resident safety and continuity of care in instances such as evacuations, temporary relocations and even in areas where Wi-Fi connection is unreliable.

7

Seamless Integration

AutumnCare Desktop and AutumnCare Medicate are seamlessly integrated allowing information to travel between the modules instantaneously.

No other medication management product on the market is as tightly coupled with its clinical counterpart, many requiring the user to log in to a different system entirely and transcribe information a second time. Not only does this duplication of data take up staff time but it also introduces the risk of errors and inconsistencies between systems.

This integration allows medication related Notes, Alerts, Tasks, Incidents and Handover items to be added to Desktop with the click of a button.

8

Person-centred Support

AutumnCare strives to deliver a person-centred experience every step of the way, not just for residents but for our clients too.

This means that all of your Technical and Clinical Support calls are answered by a real person, never by a machine.

Our Technical Support team are dedicated, prompt and driven to finding long-term solutions to improve the end user experience.

Our Clinical Operations team are available to provide staff with assistance prior to or during accreditation. This includes directing staff in setting up and producing AutumnCare reports to provide to accreditors on the spot.
